Binary Choice Analysis

Robert Hickman

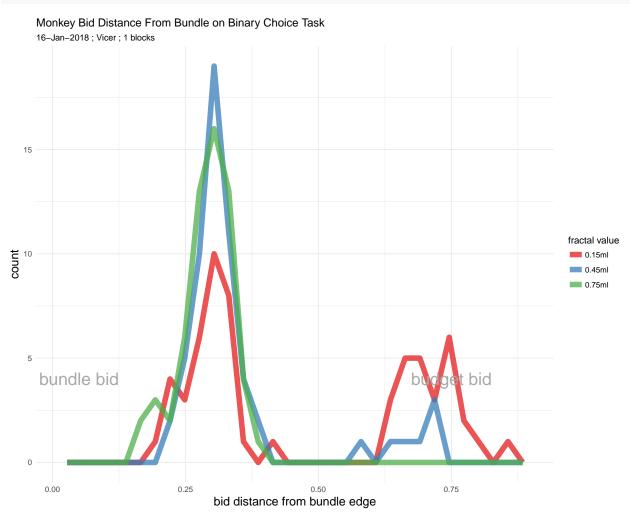

Data shown for: date ## [1] "16-Jan-2018" monkey ## [1] "Vicer" #plot p1 p1

Monkey Bid Positions on Binary Choice Task

Graph of choices for each block. Circles indicate bid selecting the bundle, squares are bid selecting the budget. A fractal bid position of 1 means that the bundle is on the left hand side of the screen. Bids range from -1 (all the way to the left) to 1 (all the way to the right)

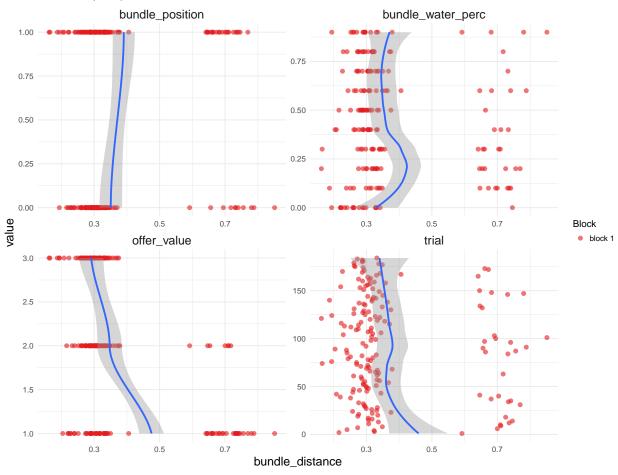

Graph showing all choices and how far away they are from the edge of the screen on the bundle side. 0 indicates full movement to the bundle side of the screen and 1 represent full movement away. Count is over all blocks for all values of the fractal (in ml of juice).

Monkey Bid Distance From Bundle on Binary Choice Task

16-Jan-2018 ; Vicer ; 1 blocks

Graphs of various factors against the distance from the bundle side of the screen the monkey bids.

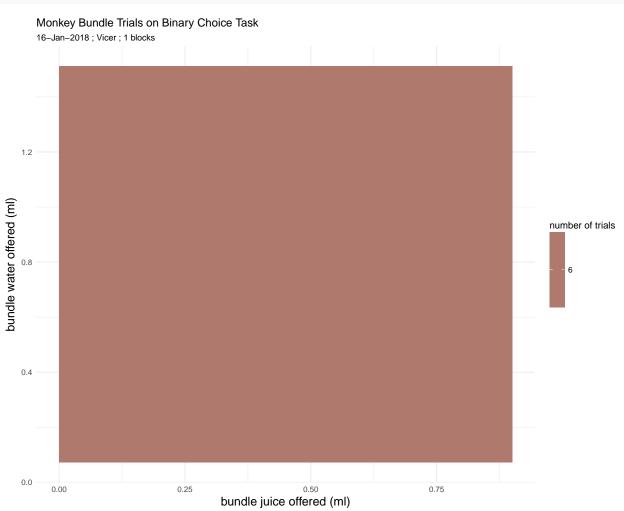

A bundle position of 1 indicates that the bundle is on the left hand side of the screen. A bundle water percentage of 1 indicates that the bundle contains no water [CHECK THIS-PRETTY SURE ITS CORRECT], whereas zero means it contains the full 1.2ml. Offer values of 1, 2, and 3 represent 0.15ml, 0.45ml, and 0.75mls of apple and mango juice (150ml in 950ml of water).

Fit lines use LOESS method.

```
#generate a model of likelihood to bid for the fractal dependent on it's position,
#value and associated water
model <- glm(data = task_data,</pre>
            fractal_bid ~ bundle_position + bundle_water_perc + offer_value + trial,
            family = "binomial")
#summarise the parameters
summary(model)
##

```

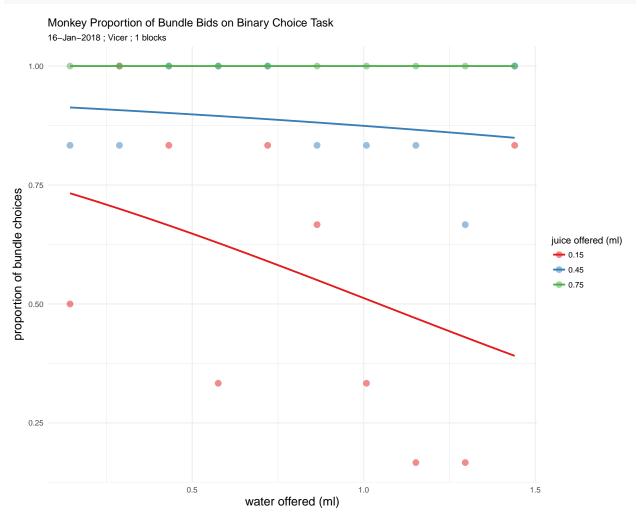

Number of Fisher Scoring iterations: 6

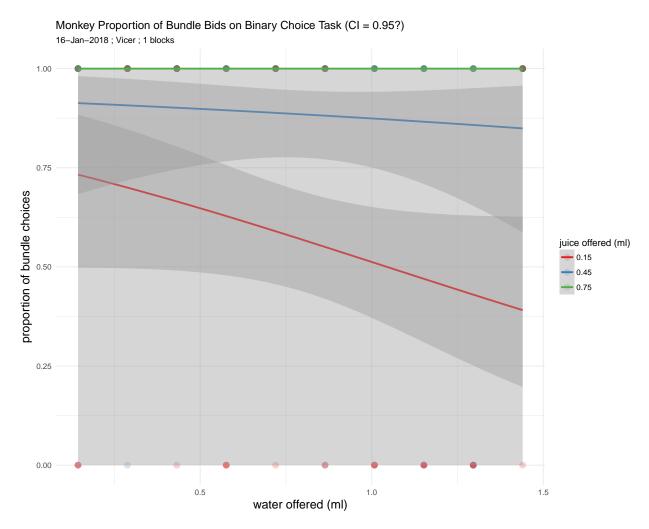

Graph showing the number of trials the monkey carried out for each bundle combination. Does not include failed trials.

Graph showing the proportion of bids for the bundle that a monkey makes, separated by the values of the juice offered in the bundles. Fits using a binomial glm model.

р6

Same graph as above but with 95% confidence intervals. Uses the default method of calculating this for the tidyverse libraries in R which I'm not convinced are the best way. Looking into calculating and plotting it myself.
